Abstracts

Portable gas detection technology can be used for hazardous gas detection, organic voc gas detection, flammable gas detection, and single gas detection. The development of accurate early warning and hidden danger detection technology has become more and more widely used in the detection and elimination of accident precursors. Its development direction is miniaturization and automation, in order to achieve long-term monitoring. The development of portable gas detectors allows the leak process to be discovered at an early stage. The occurrence of certain disasters is inevitable. How to effectively suppress and monitor early warnings, how to rationally use high-tech means for accidents, and to effectively control accidents and reduce casualties and property losses are the practical problems that need to be addressed in key production safety technologies. Through the study of the physical and chemical properties of the early accidents, gas detection and monitoring can effectively carry out pre-disaster suppression, so that accidents that may become disasters are controlled in advance, while protecting personal safety. The key to the transition from passive rescue technology to a new generation of active prevention technology is based on intelligent monitoring technology.
