Abstracts

MCT powder is manufactured from MCT oil using a process called spray drying. Manufacturers use specialized industrial equipment to bind MCT oil to a microscopic fibrous carrier powder, which converts the liquid MCTs to a solid, powdered form. During spray drying, the two substances are homogenized (blended) to create a suspension, fed through an atomizer to reduce their particle size, dried using hot air, and separated from exhaust gases. The end result is a powdered nutritional supplement with all of the benefits of MCT oil that's portable, easy to blend into nutritious smoothies, and suitable for use in recipes.
