Abstracts

The premature rupture of membranes (PROM) is a condition that occurs in pregnancy. It is defined as the breakage of the amniotic sac, which generally takes place one or two hours before the onset of contractions or labor. The early breakage of the membrane, i.e. before 37 weeks of gestation, can lead to inevitable abortion. Additionally, if the rupture of the amniotic sac resulting in fluid leakage is not detected on time, infections or Others complications many occur in the fetus or the mOthers. Leakage or a sudden discharge of fluid from the vagina is the only symptom of PROM. The exact cause of PROM is largely unknown. However, researchers believe that bacterial production in the lower genital tract that travels to the membrane can lead to a leak.
