Abstracts

Prepreg is the common term for a reinforcing fabric which has been pre-impregnated with a resin system. This resin system (typically epoxy) already includes the proper curing agent. As a result, the prepreg is ready to lay into the mold without the addition of any more resin. In order for the laminate to cure, it is necessary to use a combination of pressure and heat. There are many fiber types that can be excellent candidates for the preparation of preimpregnated fibers. Prepreg Carbon Fiber refers to the Carbon Prepreg made of Carbon fiber.
