## Abstracts

The pulsed laser power supply is a power supply specially designed for pulsed Nd:YAG lasers. Using switching power supply, the interior is controlled by a single-chip microcomputer, which is a real CNC power supply. The parameters such as laser output power, frequency and pulse width are selected through the touch-mode operation panel, and the user can program the laser pulse waveform and parameters through the keyboard to match the welding parameters with the welding requirements to achieve the best welding effect. It is an ideal configuration for multi-function laser welding machine for all metal welding needs, with functions such as misoperation and over-temperature automatic protection.
