## Abstracts

Pulse laser spot welding machine is mainly used for spot welding and seam welding of thin-walled metal materials with a thickness of less than 1mm. The welding process belongs to the heat conduction type, that is, the surface of the workpiece is heated by laser radiation, and then diffused into the material through heat conduction. By controlling the waveform of the laser pulse, width, peak power and repetition frequency and other parameters to form a good connection between the workpieces. It has a large number of applications in 3C product shells, lithium batteries, electronic components, mold repair welding and other industries. The biggest advantage of pulse laser welding is that the overall temperature rise of the workpiece is small, the heat-affected range is small, and the deformation of the workpiece is small.
