## Abstracts

This report mainly focus on Quench Coolers market. Quenching can either be used to directly control a chemical reaction or in the treatment of an emergency vent stream. For the direct quenching of a chemical reaction when loss of control has occurred, the quench material both cools and dilutes the reactants, thereby slowing down the reaction rate and the rate of heat generation to a controllable level. Quenching may be carried out by adding the quench liquid to the reactor or by discharging the reactants to a dedicated dump tank.
