Abstracts

Microwave absorbing material is a material that can absorb microwave and electromagnetic energy with less reflection and scattering. Also called radar absorbing material or radar stealth material. The basic principle of microwave absorption is to convert microwave energy into energy of other forms of motion through a certain physical action mechanism, and convert it into thermal energy through the dissipation of this motion. All forms of lossy motion excited by microwaves can become absorption mechanisms. Common mechanisms are electrical induction, magnetic induction, electromagnetic induction, and electromagnetic scattering. In practice, microwave absorbing materials often have multiple mechanisms at work.
