Abstracts

Radial agriculture tire is a particular design of agriculture vehicle tire. The cord plies of radial agriculture tires are arranged at 90 degrees to the direction of travel, and the under-tread area is wrapped around the circumference of the tire by radial belts of steel or fabric. With a radial tire, sidewall flex is not transferred to the tread, allowing for more even wear. This means the tread on a radial tire can last 2–3 times longer than a bias tire's tread.
