Abstracts

Fluorescent pigments are luminescent materials that require no artificially generated energy to reflect colored light and to give off fluorescent light. Fluorescent pigments are composed of dyed organic polymers that are formulated to be solvents for the fluorescence dyestuff. In contrast to ordinary colors, light emitted from a fluorescent color adds to the light returned by simple reflection to give the glow characteristic of daylight-fluorescent materials.

The migration of the Fluorescent pigments business to Asia, particularly China and India, continues. Since the mid-1990s, production in China and India has rapidly increased; China is now the world's largest consumer of Fluorescent pigments. Additional medium-tier to higher-value Fluorescent pigments also migrates to China from North America, Europe and Japan. Production in Europe, USA and Japan continues on a downward trend as the market has become globalized and gross margins have been squeezed.
