Electric wheelchairs, or commonly referred to as 'power chairs', are mobile chairs powered by electric motors. They are much shorter in length than a scooter and are much more manoeuvrable, making them much better for indoor use.

The seating on a power chair can be anything from a basic scooter seat, right through to a seating system that has been formed specifically around you. Certain power chairs can be fitted with power options for personalised requirements which will aid your comfort, support and positioning. These features combined make power chairs better suited to the more immobilised user with greater needs. Power chairs fall into three main categories: Rear Wheel Drive, Mid Wheel Drive, and Front Wheel Drive.

Rear Wheel Drive Power chairs are what most people would recognise as a power chair. The frame of the wheelchair can range in style and this type of wheelchair comes with a choice of folding frame or fixed frame depending on the model.

Rear Wheel Drive Power chairs are very simple to drive with the aid of a joystick control, which can be mounted on either the left or right of the wheelchair. The seating and comfort can be adjusted around your needs and they can be re-charged through a simple connection on the joystick (most models). Because the drive wheels are at the back of the wheelchair, rear wheel drive wheelchairs can need larger spaces to turn around in.
