Abstracts

Reduced fat dairy products are one of the examples of technological innovations in the dairy industry. Reduced fat dairy products have a similar taste as compared to the products that are prepared from whole milk. Reduced fat dairy products are prepared by the centrifugal process which separates fat from the milk. The centrifugal process can also remove bacteria and other harmful elements from milk. The rising dominance of diseases such as obesity due to the consumption of high-fat milk is surging the demand for reduced fat dairy products market. The medical experts recommend the consumption of reduced fat dairy products during pregnancy as it provides calcium, vitamins, and minerals that are important for the health of both mother and baby. Reduced fat dairy products help to weight loss in adults and growing age children.
