Abstracts

Rehabilitation Robotic Gloves is designed to assist in post-stroke hand recovery and other hand dysfunctions caused by crush injury cerebral hemorrhage, stroke hemiplegia, and brain injury.

This device is specially made for patients who struggle with activities of daily living(ADL). It provides direct, task-specific applications to the real world, which helps in focusing on improving mobility through targeted exercises, working on balance, strengthening the muscles, and detecting the weak conscious hand activity then boosting it to complete the intended hand movement. Thus, boost hand independence and relearning impaired skills.

Flexible robotic technology and neuroscience theory and using flexible pneumatic bionic muscles as a power source, promotes finger flexion and extension in a natural manner to facilitate fingers palm grip and release function for stroke hand recovery. It also promotes blood circulation, reduces muscle tension, relieves edema, and prevents muscle atrophy. At the same time, it can help users relearn through an exercise from the three levels of nerves, brain, and muscles, and rebuild brain nerves to control the hands' movement.
