Abstracts

There are two types of reinforced thermoplastic tubes. One is aimed at improving the resistance to internal pressure. Usually a three - layer structure, the inner and outer layer is a variety of thermoplastics, the middle layer is the reinforcement material. The other class requires not only increased resistance to internal pressure, but also increased resistance to external pressure. It is usually a multi-layer structure (more than 5 layers). In addition to various thermoplastic layers, there are internal pressure resistant, external pressure resistant and other functional layers. It is mainly used for oil and gas transportation.
