## Abstracts

The remote water meter is composed of an ordinary mechanical water meter and an electronic acquisition and transmission module. The electronic module completes signal acquisition, data processing, storage, and uploads the data to the repeater or hand-held meter reading device through the communication line. The meter body adopts an integrated design. It can record and save the user's water consumption in real time, or directly read the current accumulated number. Each water meter has a unique code. When the smart water meter receives the meter reading instruction, the water meter data can be uploaded immediately to the management system.
