Repository management software helps development teams create, maintain, and track their software packages. These solutions also provide an administrative component, allowing development teams to curate who gets access to certain packages, as well as tracking how those packages are accessed. More robust repository management software might provide teams with the ability to run static code analysis, vulnerability testing, or other code examinations to ensure all packaged code is stable, resistant to errors, and aligned with a company's security policies. A repository management solution must integrate with version control systems to be effective.
