Reservoir is a subsurface pool of hydrocarbons which is present in porous or fractured rock formations, which could be conventional and unconventional. Conventional reservoir hydrocarbons, such as oil and gas, that are confined by rock formations that overlying and are easily traced by well drilling, whereas unconventional reservoir hydrocarbons are composed inside rocks and have low permeability, and thus require superior operation plan to recover. Some of the optimum examples for unconventional reservoirs are oil sand, gas hydrate deposit, tight gas sand, bitumen, and heavy hydrocarbon.
