## Abstracts

A mortgage loan or simply mortgage is a loan used either by purchasers of real property to raise funds to buy real estate, or alternatively by existing property owners to raise funds for any purpose while putting a lien on the property being mortgaged. The loan is 'secured' on the borrower's property through a process known as mortgage origination.

Mortgage borrowers can be individuals mortgaging their home or they can be businesses mortgaging commercial property (for example, their own business premises, residential property let to tenants, or an investment portfolio). The lender will typically be a financial institution, such as a bank, credit union or building society, depending on the country concerned, and the loan arrangements can be made either directly or indirectly through intermediaries.
