Abstracts

Resuscitation medical mask is a device used to safely deliver rescue breaths during a cardiac arrest or respiratory arrest. The resuscitation medical mask is a small device that can be carried on one's person. Air is administered to the patient when the emergency responder exhales through a one-way filter valve. Modern resuscitation medical masks have either a built in one-way valve or an attachable, disposable filter to protect the emergency responder from the patient's potentially infectious bodily substances, such as vomit or blood.
