## Abstracts

Technological advancements are set to play a key role in the overall growth of the global retinal disorders treatment market in the upcoming years. Groundbreaking breakthroughs and advancements in bionics, genetics, and stem-cell therapy are expected to transform the future of retinal disorders treatment in the upcoming decade. In developed regions wherein the preventable causes of blindness are detected early, owing to routine checkups and robust healthcare ecosystem, retinal degeneration has emerged as one of the top causes of blindness or visual impairment. Macular degeneration is of two types: wet age-related macular degeneration and dry age-related macular degeneration. Diabetic retinopathy is one of the common diabetic eye disorders characterized by damaged blood vessels in the retina. The damaged blood vessels and nerves lead to vision impairment, blurring of vision, and eye hemorrhage. If left untreated, it could lead to retinal detachment and blindness.
