Abstracts

A Reusable Satellite Launch Vehicle (RSLV) refers to a vehicle which can be used for several missions. Ideally, it takes off vertically on the back of an expendable rocket and then glides back down like an airplane. Small wings assist in changing the direction of the moving vehicle during landing. The main advantage of an RSLV is that it can be used multiple times with low repair and maintenance costs. A successful RSLV would undoubtedly cut down mission costs and make space travel more accessible.
