Abstracts

Radio frequency skin tightening is a cosmetic therapy that uses a magnetic power radio frequency skin tightening instrument to remove wrinkles and tighten the skin. The magnetodynamic radio frequency skin tightening instrument generates 40.68MHz radio frequency waves at a specific depth under the skin. The radio frequency waves act on the water molecules in the collagen, causing the bipolar water molecules to rotate and rub to generate heat. The radio frequency energy released, the Lido youth light penetrates the skin epidermis. It directly acts on the dermis layer to achieve the effect of heating the collagen. The dermal collagen fibers shrink after heating, so that the loose skin and wrinkles are tightened, and at the same time, the collagen is proliferated, rearranged, and repaired to the aging and damaged collagen layer. Wrinkle firming effect.
