Abstracts

RF transceivers are devices or modules that contain both a transmitter (Tx) and a receiver (Rx). Tx and Rx elements usually share functionality including antenna interface, low pass filtering, Rx/Tx switching and associated control circuits. RF isolation elements like circulators and diplexers may also be required in the shared RF path. They are used in applications that require wireless interfaces including NFC/RFID transponders, RF modems, WiFi, Bluetooth, RF mesh networks, access control, security systems, remote control, cellular and cordless phones.
