## Abstracts

Rheumatoid arthritis stem cell therapy has been demonstrated to induce profound healing activity, halt arthritic conditions, and in many cases, reverse and regenerate joint tissue. Today, bone marrow transplant, adipose or fat-derived stem cells, and allogeneic mesenchymal stem cells (human umbilical cord tissue) are used for rheumatoid arthritis stem cell therapy. As the rheumatoid arthritis worsens, the body initiates autoimmune response and attacks the cells. Rheumatoid arthritis stem cell therapy is growing in popularity across hospitals, ambulatory surgical centers, and specialty clinics, as it increases the healing of joints and further treats the entire system that causes the joint pain and inflammation.
