Abstracts

RNA is a rather versatile technology and offers a number of advantages. RNA lacks genomic integration and its use results in transient expression of the encoded protein. This favorable safety profile makes RNA especially attractive for vaccines and gene editing. RNA is well defined chemically which ensures reproducible manufacturing at high yield, purity and activity. Improvements of lipid nanoparticle formulations as a vehicle for in vivo systemic delivery of RNA has greatly favored the development of in vivo transfection strategies.

RNA Vaccines & Therapeutics is in the development stage and there is no use in the market. The fastest research is Clinical phrase II, such as AGS-004 of Argos Therapeutics, SB-FIX, SB-318, SB-913 of Sangamo Therapeutics. The major application of RNA Vaccines & Therapeutics is for infectious disease, cancer and others. And infectious disease and cancer are the major applications.
