Abstracts

The robot navigates the field and interprets the assigned task. It helps the farmers by blowing weeds, applying chemicals or harvesting the crops, and includes navigation systems to locate themselves. It also employs cameras to pick green plants from the soil. The elimination of weeds is important as weed growth reduces the crop yield by more than 50%. Hence the robots are fitted with a precision spraying system that distributes herbicides onto the crops. The utilization of sensors in this robotic system can also monitor the nutrient levels of plants and supply fertilizer as required.
