Abstracts

Rosiglitazone maleate is an insulin sensitizer. Rosiglitazone maleate activates luciferase-based expression constructs PPAR α 1 and PPAR α 2 with EC50 values of approximately 30 nM and 100 nM, respectively. Rosiglitazone maleate (Avandia) improves glycemic control while reducing circulating insulin levels. Rosiglitazone maleate also appears to have an anti-inflammatory effect in addition to its effect on insulin resistance. Rosiglitazone maleate is active in vivo as an antidiabetic agent in the ob/ob mouse model, and has been used as an oral hypoglycemic agent in the treatment of Type II diabetes in humans for many years.
