Abstracts

The Rotary Macerator is an upgraded version of the Macerator. It is very efficient at macerating items when its RPM is high, but much less efficient than a regular Macerator at low RPM. RPM increases while macerating items or receiving a Redstone current, like with the other Advanced Machines. 7500 RPM is the maximum RPM without Overclocker Upgrades. RPM will quickly drop to 0 when it stops macerating and is not receiving a redstone signal.
