Abstracts

RTD Sensors (Platinum Resistance Temperature Sensors) are sensing elements that are made of pure platinum wire coil (wire wound) encapsulated in ceramic or glass, or a thin film platinum deposited on a ceramic substrate. Platinum RTDs have a positive temperature coefficient. The electrical resistance increases as temperature rises in a known and repeatable manner. Their linearity and unmatched long term stability firmly establish platinum RTD elements as an ideal sensor for most industrial applications. Thin film elements offer performance equal to standard wire wounds, but with improved cost, size and convenience.
