The application of rubber tube in automobile is mainly to connect engine and air filter, engine and radiator system, automobile air conditioning system, etc. As a component of the air intake system, it is close to the engine, so it needs high temperature resistance, oil resistance, corrosion resistance, aging resistance, low temperature resistance, etc. There are many kinds of materials according to different processing techniques, such as NBR nitrile rubber is widely used. Vacuum brake pipe, good oil resistance and high glue content, but relatively poor ozone resistance; EPDM EPDM rubber is used for automobile water pipe series.
