Supply chain management (including all warehouse and inventory management) is the management of the services and products to be delivered to customers. In this management, software tools are used to perform supply chain transactions and manage suppliers' relationships and control business processes. The most sustainable solution for SCM software is software as a service (SaaS). This is a relatively new ERP distribution model that allows smaller companies to leverage geographically integrated business solution hardware. It offers the benefits of installing more software without maintenance, reducing IT staff and technology costs, and improving mobility.
