Abstracts

Enterprise resource planning (ERP) systems are the backbone of many organizations, helping them manage their accounting, procurement processes, projects, and more throughout the enterprise. For many IT departments, ERP systems have often meant large, costly, and time-consuming deployments that might require significant hardware or infrastructure investments. The advent of cloud computing and software-as-a-service (SaaS) deployments are at the forefront of a change in the way businesses think about ERP. Moving ERP to the cloud allows businesses to simplify their technology requirements and see a faster return on their investment.
