Diodes are commonly used in a variety of circuits for rectification and protection. This report studies the Schottky Barrier Diodes (SBDs). A Schottky barrier diode (SBD) is a device in which a semiconductor and a metal such as molybdenum are bonded instead of a pn junction. In general, semiconductors in which metals are bonded to n-type layers have been commercialized. It is suitable for high-speed switching applications, because of small forward voltage and short reverse recovery time.
