Abstracts

The scoop stretcher (or clamshell, Roberson orthopedic stretcher, or just scoop) is a device used specifically for moving injured people. It is most frequently used to lift people who may have a spinal cord injury from the ground, either due to unconsciousness or in order to maintain stability in the case of trauma.

A scoop stretcher has a structure that can be split vertically into two parts, with shaped 'blades' towards the center which can be brought together underneath a patient. The two halves are placed separately either side of the patient, or then brought together until securing clips at the top and bottom both engage.

Scoop stretchers reduce the chance of undesirable movement of injured areas during Sports of a trauma patient, as they maintain the patient in a supine alignment during Sports to a stretcher, vacuum mattress or long spine board). They are more comfortable than a long spine board for Others

The scoop stretcher can be used for patient Others, provided the patient is strapped. However, the ninth edition of the ATLS Student Course Manual advises against using scoop stretchers for patient Others. For comfort and safety reasons, it is recommended to Sports the patient to a vacuum mattress instead, in which case the scoop stretcher is put on the Others device and then opened.
