Security Information and Event Management (SIEM) Software helps in creating logs and storing them while providing high security. The logs can be checked in the situation of a breach or security threat to identify the issue and to immediately take action. SIEM has evolved the way in which data is stored and events are recorded. SIEM is a combination of SEM (Security Event Management) and SIM (Security Information Management). SEM helps in monitoring events and threats on a real-time basis and SIM helps in collecting and analyzing log data.
