Abstracts

A Seeding Equipment is a device that sows the seeds for crops by metering out the individual seeds, positioning them in the soil, and covering them to a certain average depth. This makes sure the seed will be placed evenly.

The Seeding Equipment sows the seeds at equal distances and proper depth, ensuring that the seeds get covered with soil and are saved from being eaten by birds. This allows plants to get sufficient sunlight, nutrients and water from the soil. Before the introduction of the Seeding Equipment, a common practice was to plant seeds by hand. Besides being wasteful, planting was usually imprecise and led to a poor distribution of seeds, leading to low productivity. The use of a Seeding Equipment can improve the ratio of crop yield (seeds harvested per seed planted) by as much as nine times.
