Self-luminous is a next generation display technology which is generally used in the manufacturing of organic light emitting diode (OLED) and quantum dot display (QLED). Self-luminous displays have a wide range of applications in the consumer electronics industry which primarily encompasses smartphones and TVs. Quantum dots (QD) are a suitable type of material for the production of self-luminous displays. Quantum dots are small molecules which have multiple special properties, one of which is the ability to glow when provided an appropriate amount of energy. The wavelength generated varies as per the size of the dot. Hence, the final color outcome can vary.
