Semiconductor manufacturing comes with its own unique sets of challenges, one of the biggest being sealing against microscopic particles. As with many manufacturing processes, contamination is one of the biggest enemies of sealing performance. In standard industrial sealing applications, contamination will be measured in millimetres, but in the semiconductor industry, it's measured in microns. Semiconductor seals are used to avoid contaminations by reducing particulates, lowering extractable, and resisting degradation in harsh plasma.

This report mainly studies O-rings used in semiconductor industry. O-Ring, the cutting edge is a 'O' shape, which is the most common, classic, economical and useful sealing type in both dynamic and static application.

Note: China in this report includes China Taiwan.
