## Abstracts

Semiconductor probe cards, used in wafer-level IC testing, are the contact interface between the semiconductor test equipment and the bonding pads of the devices under test.

Probe cards are normally mounted onto a wafer prober, and connected to the tester. A single defect in these circuit assemblies will affect the contact reliability, compromising the test results. For this reason, the probe card integrity must be verified before using it on the semiconductor test system, to be sure it is defect-free and capable of properly contacting and testing the semiconductor devices.
