## Abstracts

As disease diagnosis and subsequent treatment continue being the key cornerstones in aquaculture, seafood farmers are more than keen on integrating state-of-the-art improvements into their health management paradigms. Disease management has always been a bright spot in aquaculture, as intensively cultured seafood products remain naturally susceptible to viral infections. As 'disease-free' certifications started making their way to the prominent requisites for successful transactions in the shrimp landscape, adoption of effective diagnostics became highly imperative for shrimp suppliers to ensure product integrity.
