Abstracts

The three main films used in shrink packaging material for protecting and securing products for the retail and shipping environments are polyvinyl chloride (PVC), polyethylene (PE), and polyolefin (POF). Each have different capabilities and characteristics that make them suitable for specific applications, and each can be co-extruded into multilayer films with different additives offering specific barrier properties required for shelf-life or appearance. Shrink films can be formed into flattened rollstock, bags, overwrap, banding and tubing, and add a form of tamper-resistant protection to packaged goods.

This report contains market size and forecasts of Shrink Wrap Film in global, including the following market information:
