Single-sided PCB, also known as single layer PCB, which is a type of PCB which comes with only one layer of conducting material on one side of the board and other side is used for incorporating different electronic components on the board. Single layer PCB is widely used in the printed circuit board design in a variety of different electronic sectors where low costs are required. What's more, single layer PCB has been made of various of material, such as paper reinforced phenolic resin with copper foil and glass fiber reinforced epoxy resin with copper foil and so on. Needless to say, single-sided PCB is one of the most commonly fabricated boards as they are very simple and basic to make.
