Abstracts

Single-use video endoscopes are an emerging technology that integrates components accurate and reliable enough for medical use but inexpensive enough to be suitable for single-patient use. Single-use video endoscopes are suitable for use on highly infectious or immunocompromised patients. The products are already sterile on delivery and thus provide an ideal solution for Hospital & Clinics and practices where flexible endoscopes can only reprocessed at great cost and inconvenience.

Endoscopy is a minimally invasive procedure in which an illuminated tubular instrument is used to enable physicians to examine a hollow organ, passage, or cavity of the body. Unlike non-invasive diagnostic techniques, endoscopes inserted directly into the body to perform an internal evaluation of the patient and diagnose or monitor health issues in the esophagus, stomach, colon, ears, nose, throat, heart, and urinary tract.

In this report, we only study the endoscopy scope without endoscope monitor, etc.
