Abstracts

The six-axis parallel positioning system is a parallel kinematics system that can provide X, Y, Z, pitch, roll, and yaw six-axis degrees of freedom. The six-axis parallel positioning system is creative and remarkable for complex motion applications requiring high load capacity and precision of up to six independent axes. The positioning system is driven by six industry-proven high-performance actuators, and equally important are the 12 spherical joints that connect the actuators to the lower static and upper moving platforms.
