Abstracts

Skin whitening agent is a substance that can significantly control and inhibit the production of melanin and meet the safety requirements by acting on the formation and metabolism of melanin in the skin at a certain stage. The process of skin melanin production is mainly carried out in melanocytes, which are characteristic organelles of melanocytes. Under the action of tyrosine enzyme, the tyrosine in the body is transformed into dopa, dopaquinone, dopa pigment, 5, 6-dihydroxyindole, indole-5, 6-quinone, etc. [1], and finally becomes pigment particles.
