A Smart Bluetooth Speaker is a voice-enabled speaker with an integrated virtual assistant that offers interactive actions and hands-free activation with the help of one 'hot word' (or several 'hot words'). Some voice-enabled speakers can also act as a smart device that utilizes Wi-Fi, Bluetooth and other wireless protocol standards to extend usage beyond audio playback, such as to control home automation devices. This can include, but is not limited to, features such as compatibility across a number of services and platforms, peer-to-peer connection through mesh networking, virtual assistants, and others. Each can have its own designated interface and features in-house, usually launched or controlled via application or home automation software. Some voice-enabled speakers also include a screen to show the user a visual response.
