Abstracts

A garage door opener is a motorized device that opens and closes garage doors. Most are controlled by switches on the garage wall, as well as by remote controls carried by the owner.

A smart garage-door controller is an add-on that works with your existing garage-door opener, letting you control the door from anywhere ..

The smart garage door opener is far older than the Internet, but today's connected technologies have added new capabilities for monitoring and sharing access to your garage from anywhere in the world.

With the help of mobile apps, not only will your smartphone replace your garage's remote control, but you'll also get reminders when you've left the door open, easily manage who can access your garage, get notifications to your cell phone whenever the door is used, set rules for automatic opening and closing, and even monitor the garage via a video stream.

This report studies the smart garage door opener market.
