Abstracts

Smart glasses are among the smart wearables that consumers procure and use. Smart wearables are devices that are worn on the body either as an accessory or as a part of the material used in clothing. These smart wearables can connect to the internet and provide the user with data about their surroundings. Smart glasses display real-time information directly onto the user's field of vision by using AR techniques. These smart glasses can perform more complex tasks, such as run applications and support internet connectivity.
