## Abstracts

Smart pill technology is a revolutionary technological innovation that has reduced the gap between healthcare and digital technology. Smart pills or Nootropics are basically medical devices and small embedded electronic appliances such as sensors, cameras and trackers. This electronic device can be easily swallowed and provides complete evaluation of the gastrointestinal tract (GIT). The emergence of these healthcare-cum-technology devices has addressed the soaring need of better diagnostics and monitoring. It has outperformed the conventional GI monitoring endoscopy with more convenient smart pill technology, which has now become the standard non-invasive diagnosis technique for motility disorders. Moreover, it helps physicians in real-time patient monitoring through remote controlling options.
