## Abstracts

The intelligent trash can is composed of advanced microcomputer control chip, infrared sensor detection device and mechanical transmission part. It is a new high-tech product integrating machine and optoelectronics. At 35cm, the lid of the trash can will automatically open, and the lid will automatically close after 3-4 seconds after the garbage is put in. People and objects do not need to touch the trash can, which completely solves the hidden danger of hygienic infection for users in traditional trash cans. It can effectively prevent the spread of various infectious diseases through garbage and prevent the overflow of garbage smell in the barrel.
